

Assignment-1 Template

STUDENT NAME

Ziyad aljemely

CLASS / SECTION

202

1 Functional Requirement

What the system does: "When <trigger>, the system <behavior> and <result>."

When a student borrows a book the system records the borrowing successfully

2 Non-Functional Requirement

How well it does it — give a measurable target, not the word "fast".

The system should respond to requests within 2 seconds

3 Responsibility

The ONE job each module is trusted to do. One sentence, no "and also".

The module manages borrowing and returning books

4 Boundary

What the module exposes to others, and what stays hidden inside it.

It shares borrow and return functions.

5 Cohesion

Why these parts belong in one module: they all change for the same reason.

All functions are related to borrowing and returning books

6 Coupling

Which module depends on which, and how you keep that link weak.

The module uses simple functions to connect with other modules
